PROFESSIONAL SUMMARY

First-year B.Tech Computer Science / IT student at VIT Vellore with an interest in software development, computer vision, augmented reality, and practical technology solutions. Building programming skills in Python, Pandas, NumPy, and OpenCV through hands-on learning and project exploration. Interested in applying technical knowledge, creative problem-solving, and continuous learning to academic and collaborative projects.

EDUCATION

Vellore Institute of Technology (VIT), Vellore
Bachelor of Technology (B.Tech) — Computer Science / IT
First Year | Expected Graduation: 2030

TECHNICAL SKILLS

- **Programming:** Python
- **Data Analysis:** Pandas, NumPy
- **Computer Vision:** OpenCV, ORB feature detection and matching, feature descriptors, homography concepts
- **Application Development:** Exploring Streamlit and software prototyping
- **Areas of Interest:** Software Development, Computer Vision, Augmented Reality, Spatial Computing

PROJECTS

Image Feature Detection and Matching | *Learning Project*
Python, OpenCV

- Practiced ORB-based keypoint and descriptor extraction, feature matching, and good-match filtering between images.
- Explored homography matrices to understand image alignment and relative transformations.

NASA FIRMS-Based Environmental Monitoring System | *Academic Project — In Development*
Python, Streamlit, NASA FIRMS

- Developing the concept of a software-based fire-monitoring prototype using NASA satellite-derived fire data.
- Exploring data processing and visualization for presenting fire-related information through an accessible interface.

Quol — AR Smart Glasses | *Concept and Technical Learning Project*

- Developed a smart-glasses concept focused on hands-free access to digital information.
- Exploring real-world navigation overlays, object recognition, SLAM, and spatial anchoring.

VIT Campus Shuttle Tracking Application | *Early-Stage Concept*

- Proposed a campus mobility application featuring live shuttle locations, routes, stops, and schedule information.
- Exploring GPS hardware integration and backend requirements for real-time tracking.

CORE STRENGTHS

Problem-solving • Independent Learning • Technical Curiosity • Creative Thinking • Project Ideation
